

Dear Hiring Manager,

I am a Software Engineer with 10+ years of experience delivering, modernizing, and stabilizing enterprise applications across frontend, backend, cloud, and distributed environments using C#, .NET, Angular, SQL Server, Azure, and AWS.

Throughout my career, I have led greenfield initiatives and large-scale modernization projects, owning technical decisions across application architecture, scalability, CI/CD alignment, environment governance, and long-term system maintainability. My experience includes rebuilding enterprise platforms from legacy systems, implementing modern cloud-based solutions, optimizing high-volume applications, and balancing delivery speed with production stability during critical business phases.

Beyond hands-on development, I have operated in Lead Consultant and senior engineering roles, mentoring developers, leading technical initiatives, collaborating with stakeholders, and helping organizations navigate modernization efforts with a pragmatic and business-oriented approach.

My technical background spans full-stack engineering, performance optimization, cloud-based architecture, reactive frontend development, microservices, and distributed systems, always with strong focus on scalability, maintainability, and operational reliability.

I value environments where engineering quality, ownership, collaboration, and thoughtful technical decision-making are aligned with measurable business outcomes.

Additional background, technical experience, and engineering profile can be found at:

Thank you for your time and consideration. I welcome the opportunity to discuss how my experience and engineering approach could contribute to your team and initiatives.

Sincerely,

Rogelio Pérez

Software Engineer | Full-Stack Engineer | Lead Consultant
